DOMINION EXPERIMENTAL STATION A GREAT ASSET

FARM ON BUSINESS BASIS AT EXPERIMENTAL STATION

If anything is needed to inspire faith in Alberta's resources and agricultural productivity, a visit to the Dominion government experimental station on the outskirts of Lacombe should turn the trick. Here is a large enterprise, a link in a chain of 21 experimental farms from Prince Edward Island to Vancouver Island, devoted to the vital work of placing agriculture on a scientific basis.

Marketing the dollars and cents aspect of agriculture, has come to the forefront in the recent period of economic stress and deflated commodity prices and more than ever before in history farmers are concentrating on the dual problem of reducing costs through greater efficiency and improving the standard of their products.

Central Alberta's experimental farm is under the direction of F. H. Reed, B.S.A., Superintendent, assisted by G. E. DeLong, B.S.A., M.Sc., in charge of field crops and horticulture, and H. E. Wilson, B.S.A., in charge of livestock and poultry.

A well-kept driveway, at its entrance a large sign: "Visitors Welcome," is bordered by flower beds, grass plots, trees and hedges and leads to the office, residences of the staff and farm proper, a model farm in every sense of the term. The farm is 480 acres in extent and there are another 200 acres rented.

"We haven't enough land; that's one of our chief difficulties. I want the Department of Agriculture to purchase a section," Superintendent Reed told the writer.

Mr. Reed will tell visitors that his farm is located in the most fertile valley on the North American continent. Certainly, it would be difficult to imagine a more suitable location for a mixed farm embracing as it does meadow, upland, prairie and hillsides, protected from windbreaks, and all well watered.

This writer was visiting the farm when members of the Science Museum, U.F.A. local, of Donaldia district, and their families, 50 strong, arrived after a 75-mile drive to spend the day in increasing their knowledge of scientific farming. He was invited by Mr. Reed to join the party in all afternoon inspection of the farm.

Practically every day, large parties of farmers, some numbering well over 100 members, are shown around the farm and receive the benefit of lectures on the work in progress, delivered by members of the staff in charge of the respective projects.

Such a tour is indeed a revelation in practical farming.

In fact being practical is the foundation of the farm's operation and this is summed up in Mr. DeLong's admonition to his listeners: "You pay the same taxes and have the same costs on your land, no matter what type of produce you raise on it. Why not be practical and raise the best?"

One day spent on the farm by no means suffices to see all its wonders and learn all the lessons it teaches, but one gains a practical insight into farming as it should be and the farm staff has prepared bulletins on various experiments and aspects of agriculture that may be had for the asking. The staff is prepared to answer questions or give information on any phase of Alberta's basic industry and foundation of wealth.

The stock buildings are by no means elaborate but are practical and accessible. They are equipped with concrete floors, feeding troughs, drinking basins, etc. They seem to illustrate not how much capital but how little capital can be utilized to give farmers the best and most serviceable of farm necessities.

Typical of tours about the farm conducted every day, the farmer party starts out with Mr. Reed and one or more of his assistants. Every point is explained to them, the why and wherefore of each custom or practice on the farm while members of the party relate their experiences and problems and bombard their preceptors with questions.

"You've got to cater to the market these days. No longer can a farmer lose a cent or two a pound because he favors some particular kind of animal. He has to raise what the market wants," Mr. Reed explained.

Passing through the pig pens and feeding fields where grunting aristocrats of their breed poke for succulent tid bits, Mr. Reed tells how pigs should be raised for the market, how long each pen should be used and what feed should consist of.

Purchased Shorthorn cows, some for milking and some for meat, graze placidly in the green meadows and

lesson to thousands of Alberta farmers.

Other fields show the contrast between using fertilizer and not doing so. The fertilized patches are greener, more advanced and better in every way than the unfertilized plots.

The farm has no less than 100 named varieties of wheat from all parts of the world growing for illustration purposes. Here is wheat from King Tut's tomb, of the kind that was grown in Egypt thousands of years ago. It has a huge clubbed head and, as Superintendent Reed said, laughingly, is "good for nothing except a curiosity." There is also Persian and Polish wheat, bearing a marked resemblance to oats, and other strange varieties.

Under cultivation, also for illustration purposes, are 100 named and 150 unnamed varieties of oats. In other test rows are rows of winter wheat.

The farm has cut 140 tons of hay and expects another 15 tons. 400 tons of ensilage will be stored this summer to feed the stock.

In other parts of the farm are beautiful flower plots, fine fruit, berries and vegetables under cultivation, well kept poultry runs and an apiary with 30 colonies of bees which last year produced well over two tons of honey.

The cattle barn gives one touring the farm another object lesson in the value of efficient farming. Clothed in white, the farm hands milk the cows and carefully weigh and record the daily yield from each cow. There is one cow that gives nine times the yield of an average milk cow on an Alberta farm. "It illustrates the value of purebred stock," is the comment of the staff.

Between 10 and 15 men are employed the year around on the farm and this reaches a total of 30 during the spring rush.

In addition to experimental work, the farm sells breeding stock to farmers and provides them with seed-cleaning facilities. The Lacombe seed-cleaning registry of swine is the largest in Canada.

Superintendent Reed was brought up on a farm and still knows the necessity of working from "dawn to dark" in his chores.

He urges groups of farmers to organize and field days at the farm, providing them with assistance and co-operation. He is ready to prove a visit is well worthwhile.

At the farm there are seventeen strains of Roward wheat under test, including two from Herman Treffe and one from Joseph Smith of Wolf Creek, both of whom won world's championships.

Mr. DeLong will discuss frankly the relative merits of wheat types and aspects to prove that Roward wheat is the best wheat generally suitable for Alberta. However, he says that districts suitable for Marquis wheat, should grow this type. No Durham wheat should be grown in Alberta at all he says.

There are 30 varieties of fall wheat being tested and 1,200 farmers samples are grown in separate rows, each marked by an identification tag. This is regarded as one of the most important object lessons in practical agriculture on the whole farm.

If you don't see anything else on the farm, a study of this plot is well worth your trip, no matter how far you came," Mr. Reed tells his visitors.

Examining the farmers' sample plot with the Donaldia group, Mr. DeLong singled out a row which the tag showed had been seeded with wheat from a Donaldia farm.

"The farmer who produced this wheat may be here today but I am going to tell you all just the same that he is a dangerous menace to himself, his neighbors, and the whole of agricultural Canada. He probably thinks he is growing Garnet wheat, but in the row I find clubbed wheat, and about 12 other varieties. He is getting a No. 4 or a No. 5 grade at the elevator and wonders why. Failure to use clean seed is costing this man up to 10 cents on every bushel of what he sells," Mr. DeLong declared, at the same time pointing out that this should be a

A Wonderful Collection of Indian Relics

RELICS OF PIONEER DAYS AND INDIANS ARE KEPT CAREFULLY

A highly interesting collection of antiques, curios and relics of the pioneer days of the great northwest gives Lacombe a museum which a much larger centre would be proud to claim. Operated by P. H. Winter, the Lacombe museum is well worth a visit and, as the visitors' register reveals, many persons from various parts of Canada have examined its curios.

Old flintlock muzzle-loaders of the type that the early fur traders gave to the Indians in exchange for furs piled flat to the height of the long iron barrel, alone weapons and instruments fashioned by the Indians many years ago, beaded work, ceremonial costumes of the redskins and other examples of Indian art and handicraft are featured in the museum.

Meteorites found in Alberta after they had hurtled through space from some unknown planet, and highly interesting specimens of petrification, including petrified meat, bacon, fish, or heart, wood, animal and human parts are displayed.

Another interesting relic is a pirate pistol, with a brass bell mouth and a wicked-looking bayonet at its muzzle; truly a vicious weapon well adapted to the tactics and practices of the bloodthirsty buccannery who sallied the Spanish Main.

One display is a large number of Indian Arrowheads picked up on a single acre of ground near Alix, obviously an early Indian battleground where painted warriors, uttering war-whoops, had dispatched scores of arrows at their enemies.

Famed Sitting Bull's powder flask, with a document testifying to its authenticity is shown.

Many volumes would be required to catalogue and describe all the exhibits in the museum.

There are many fine antiques from European countries, old books, rare

per bottle, 300 years old; an ancient Romanian fall lock, dinosaur fossil, found in the Red Deer district, was souvenir and pictures, buffalo knives used by the Indians and the early white men, ancient corn, and wild rice crushers, an old stone house, found six miles northwest of Lacombe, a souvenir medal given to the crew of Lord Nelson's ship Foudroyant, animal skin fashioned into tobacco pouches and other Indian accessories and many other exhibits, shopped in the early history of the Canadian west.

Premier Brownlee Makes Good Move

In delegating to Hon. O. L. McPherson, minister of public works, the duty of supervising all unemployment relief in the province, Premier Brownlee has made a move which should greatly aid the efforts of municipal authorities to cope with this ever-extending and increasingly complex situation.

Well intentioned as was the planing of provincial relief machinery at the outset, with development of the work to an extent far beyond anything ever contemplated, it has been found that new and better machinery as well as adjustments of the original plan are needed. Contacts with the deciding powers at Edmonton over cases of a special sort which have been constantly developing, have been too difficult to make, and resulting decisions too slow in arriving.

With Hon. O. L. McPherson in full charge as supervisor and regularly visiting the various relief centres it should be possible to get quick action on all these special cases. Such visits, too, will ensure at all times a comprehensive and accurate view of the situation for the government, which is something most important and much to be desired.

Hon. Mr. McPherson has shown himself to be an energetic and capable head of the public works department, his administration of the highways branch being very much to his credit. That he will do equally good work as provincial relief supervisor, if given a reasonably free hand in the belief of municipal and other authorities who know his record and have come into personal contact with him in the past.

A Holiday Crowd at Gull Lake

What's Happening Around Mirror Will Not Collect the Over Payment Bad Check Artist Is Sent to Fort

Miss Lela Johnson and Andy Lakoy of Penikese and visitors at the home of Mr. and Mrs. J. Lakoy. Mrs. H. Watters and children returned to Big Valley on Tuesday after visiting with friends here.

Mrs. Williams and Margaret went to Calgary last Friday to meet the Misses Katherine and Jella Williams who have been spending a few weeks with relatives at Bonners' Ferry, Idaho. They reached Mirror on Saturday.

Miss Leona Olson is visiting for a week with her sister Esther at Calgary. Rev. and Mrs. W. P. Griffiths and daughter are holidaying at Banff for the rest of August.

The gravel crusher finished work on Saturday last, which means we now have a gravel highway completed through to Calgary. This road will not only serve the eastern portion as a short cut to the southern city, but will relieve to a great extent the heavy traffic on the other Edmonton-Calgary highway.

Mr. and Mrs. K. D. Stewart and small daughter Norma are visiting with her mother, Mrs. Ohlberg for a while.

Mrs. Amy Erickson of Belleville is visiting at the home of her parents, Mr. and Mrs. Wheeler. Mrs. Mary Burns, who has been visiting with her daughter, Mrs. Wheeler, for the past six months, left for Landis, Sask., on Saturday.

Definite denial was made by Premier Brownlee in a statement recently made at Edmonton, of rumored plans of the Wheat Pool to collect from this year's crop certain losses sustained in previous years. Premier Brownlee's comment to The Edmonton Journal was as follows:

"I have been surprised to hear that rumors are again being circulated throughout the province with respect to the Wheat Pool, to the effect that an attempt will be made to make up the losses in connection with the 1929 crop by deductions from any crop delivered to the Pool this coming crop season."

"I wish to again state, as I did last year, that there is no truth whatever to the suggestion. The agreement between the government and the Wheat Pool, as ratified by the legislature, for a period of twenty years. No attempt whatever will be made to collect any sum from the various growers as individuals, but we fully expect the Pool will be able to make its annual payments out of its total earnings."

A CRASH ON BARNETT

On Saturday evening, Gordon Sharp and a gentleman named Kerr, from Ponoka, came together at the intersection of Barnett Ave. and cars came through the mix-up with slight damage. It might be well to have stop lights placed at this dangerous corner.

CARD OF THANKS

Mr. and Mrs. C. W. Braithwaite and family wish to thank those kind friends and neighbors who so willingly assisted and extended sympathy in our recent and bereavement, also those who sent floral tokens.

Memorial Service

The Annual Memorial Service and Decoration Day will be held in the West We Forget Memorial Park on Sunday, August 28 at 2:30 p.m. Mayor E. H. Jones will preside.

YOU'LL ENJOY A VISIT TO THE LACOMBE NURSERIES

No better possible demonstration of what can be done in the beautification of Alberta homes and grounds, whether urban or rural, could be found than the home of J. N. B. MacDonald, Lacombe Nurseries, Limited, at Lacombe, Alberta. It would be difficult to find all Alberta to find a more attractive informal drive and home approach, or a lovelier pool and rock garden.

Here all the principles of landscape gardening, so often transgressed by the amateur gardener, have been followed with charming results. Beautification is effective but designed to set off the house rather than give it an appearance of springing from a mass of shrubbery. The wide expanse of lawn is green and restful, trees and shrubbery in front have not been allowed to grow high enough to shut off the glorious panorama of purple-blue hills that are the glory of this situation. Around the irregularly curved edges of the lawn are planted many rare shrubs which give a variety of foliage and flower. The taller varieties, of course, are at the back of the border graduating down to perennial plants in front, with a vivid accent placed here, such as golden elder along the border and there.

The principle of progressive planting has been followed, so that there is a succession of color in the borders from early spring until late fall. When the iris die, the peonies bloom, to be followed by roses, with many other flowers in company and succession.

One of the loveliest trees is a cut leaf, weeping birch planted in a cut near the house. Koester blue spruce grafted and imported from Holland and a beautiful variety of pink and white honeysuckle, Siberian dogwood, many varieties of lilac, arbutus, in many forms, broad leafed spruce, green ash, flowering currant, the fruit of which is splendid for eating and jelly; Russian willow, mountain ash, Tilia, and Blechnum, Rosa Hama with its red and white roses flowering on one bush, elm and spruce, are a few of the lovely shrubs grown most successfully here.

One of the interesting things about the home grounds and the nurseries that stretch for acres behind them is the fact that no irrigation is used. The growth is therefore slower, but much harder and less liable to kill back with drought, rendering these shrubs infinitely more suitable for transplanting the prairies, where excessive moisture is not available. Interesting work in the grafting of "weeping" and blue trees is done with a number of varieties, and much of the stock is imported from Holland for lining out purposes and acclimatizing.

Behind the house, but visible from the drive is one of the loveliest gardens in the province, which although created only 14 months ago has the restful charm of an old-world garden. Surrounded by a low hedge of blue spruce, the garden is centered by a flagstone bordered lily pool in which lilies and golden fish live happily among the lily pads and lily leaves. Formal rose border containing more than a dozen varieties encircles the flags that edge the pool and beyond, another flagged path, a fascinating rock garden of slopes upward to the spruce hedge. In it are many varieties of tried rock plants that grow well in Alberta, among them the famous Swiss Edelweiss for the securing of which lives have been lost. A half-dozen varieties of colorful foliage and blossoms are secured among these rock plants.

Garden furniture made in Edmonton adds to the charm of this sunken garden on either side of which are white stone benches. There is a sundial and fountain, gazing ball, while among the flowers and foliage white plaster bunnies nestle cunningly and quaint gnomes fish in perpetual content to the extreme delight of the little granddaughter of this house.

To many the most fascinating part of the nurseries is the rose garden where more than 40 varieties are growing in beautiful profusion. The Dorothy Perkins and Tausendsochen, the most famous, are growing here. A visitor of Victoria and Vancouver gardens, "Madame Edouard Herriot," and "Dolly Mail Rose," is perhaps the most admired, while Rosa Hama, one of the best hybrid Rugosa roses with rich color and clinging perfume is one of the most successful for planting among shrubbery. Two varieties of yellow roses are particularly lovely and in this connection, David Macdonald, secretary of the firm offers a bit of advice to rose growers. The yellow rose is the only variety that blooms on second year wood and for this

reason should not be pruned as it is necessary to prune other roses. They grow very slowly.

Recently the Lacombe nurseries has purchased a display place comprising four acres in the main highway just across from the gate of the experimental station at Lacombe. Here, without driving even the short distance to the nurseries, visitors may see the choicest specimens of everything grown at the nurseries. It will also be another beauty spot in Lacombe. The main nurseries cover 20 acres, with 13 more to the south.

Mr. Reed, superintendent of the experimental station is enthusiastic about the new plan for the display gardens. He states that he advises many who seek advice on horticultural matters of the dependability of the nursery stock. The firm was established in 1912 by J. N. B. MacDonald, who for the past 50 years has devoted his untiring energy to the study and propagation of trees and shrubs in Ireland, Scotland and for the past 25 years in Alberta. Mr. MacDonald and his sons have always maintained a high standard in their selection and free replacement is guaranteed, owing to the quality of the root system.

An efficient and experienced free landscape service is maintained for the benefit of their clients, who can be assured of the very finest service whether it be a modest home, estate, institution, grounds or park.

Some of those whom they are honored to have as clients are as follows: federal government, provincial government, cities of Edmonton and Calgary, Caprose, Wetaskiwin; Edmonton Golf and Country Club, Mayfair Golf and Country Club, Highlands Golf Club.

—By Zoe Pauline Trotter—

News From Alix

Cream prices took a turn for the better this week at the local creamery, coming up two cents, making special worth fourteen cents instead of twelve cents.

Mr. and Mrs. Jim Arnott, of Huxley were guests of Mr. and Mrs. W. C. Tallman over the week end and on returning home were accompanied by Mrs. R. Larkin and her two daughters who are visiting them this week.

Mr. and Mrs. W. J. Tamblin and two children of Toronto, Ontario, were visitors of Mr. and Mrs. W. H. Huxley from Wednesday until Monday. They were on the return of a western trip which covered Western and Southern States, British Columbia and Alberta, a total distance of some eleven thousand miles.

This week the binders started out in real earnest and the wheat is rapidly being put into stock. The extremely hot weather of the past few days is bringing all the grain to maturity in a hurry and the present weather continuing it will keep our farmers jumping to keep up with the cutting.

Friends of the family will be grieved to learn of the death, at their home ten miles east of Alix, of Minnie Dorothy, beloved wife of Mr. S. Cruickshank, who passed away on Sunday, August 14th, following an illness extending over a year, cause of death being cancer of the stomach.

The death took place in an Edmonton hospital on Sunday, August 14th of Frederick Adamson, aged 41 years. Deceased was well known here, having been employed at the Hospital as engineer for some considerable time. He married Miss Mabel Young, a Ponoka girl, and besides his wife, he leaves one daughter, Mona, and his mother.

A quiet but pretty wedding took place on Thursday morning, at the rectory in the Highlands, Edmonton, when Miss Isabelle Marshall, daughter of the late Mr. and Mrs. James A. Marshall, of Ponoka, became the bride of Mr. H. Bodie, of Camrose, Alta. Rev. Dr. Roxburgh performed the ceremony. The bride wore a champagne gown and carried a bouquet of opheelia roses and lily of the valley.

The 40th Anniversary of "SALADA" TEA

For 40 years SALADA has given the finest quality in tea. Present prices are the lowest in 15 years.

Lessons Of The Depression

A cabinet minister in one of the prairie provinces has expressed the view that the present business depression in this country is "a blessing in disguise" because it is teaching people many lessons which it is in their own interests and in the interests of the country at large they should learn.

While one can agree that many people are learning some rather hard lessons these days, taught in the school of bitter experience, we are hardly prepared to go so far as to regard such experiences as "blessings," even in a disguised form. The men and women out of work in cities and towns, and the farmers who have suffered complete crop failure year after year, and who have not been able to market such meagre crops as they may have succeeded in raising at a price above the cost of production, and both of which groups have, of necessity, been forced to subsidize Government and Municipal relief, and go deeper into debt for that relief, fail to see where the "blessings" come in.

But it cannot be denied that some valuable lessons are being learned, hard and bitter though the experience of learning those lessons may be. And if these lessons are thoroughly learned, taken to heart and not forgotten when the difficult days of the present have passed, then the trials and hardships of the present will not be all loss; there will be some profit in future years.

Quite a few people, for example, have learned to appreciate the value of having a little something in reserve, something laid by for a rainy day, as the old adage puts it, or perhaps, on the prairies we could more appropriately say, for a dry year. The mistake of spending up to the last dollar of one's income in years when they had incomes has been impressed upon thousands of people, and it is probably safe to predict that, when once again these people are in receipt of incomes in excess of their actual living requirements, they will lay something aside by small instalments from their weekly wages or annual farm operations.

Governments, too, have probably had the lesson offered upon them that they likewise must accumulate reserves in years of prosperity to tide themselves and their people through the lean years, rather than, as in the past, embark on large spending programmes when revenues are large and easy to collect. Public debts should be reduced in good years, because they are bound to rise in bad years. When times are generally prosperous, Governments can afford to hold off large programmes of public works and construction, and proceed with them when general employment declines and it is necessary to provide work.

Governments and large industrial employers of labor, it is to be hoped, have also learned to appreciate the fact that they have an obligation towards all the people on the one hand and their own employees on the other, and that the profits accruing to industry in good years must not, in the future, be all distributed in dividends to shareholders, or held in reserve to pay dividends when business drops off, but that an adequate percentage of those profits must be set aside in some form of unemployment insurance in order to provide protection for the workmen who assisted to create those profits. In future labor in industry must be protected just as effectively as the shareholders in industry. Many large concerns realize this, and even welcome it, but it is the duty of Governments to see that it is universally adopted.

Another lesson that is being learned is the wisdom of putting all one's eggs in one basket, to quote another old proverb. In good times many business men have re-invested all their profits in expanding their business far beyond the needs of normal years. They have acted as if "boom" conditions would always prevail, with the result that when business declined they had plants on their hands, with heavy overhead expenses, which it was impossible to carry under decreased business conditions. The same thing can be said of many farmers. When crops were good and prices high, they bought more and yet more land, more machinery, more everything, frequently borrowing large sums to enable them to do these things. Then with smaller crops and lower prices they found they could not make money, could not pay their debts, while if they had held some of their former profits in reserve instead of tying them all up in so-called fixed assets, which often turned out to be fixed liabilities, they could have carried on without much worry.

Lack of ready money in this depression has taught many of us how to really economize; how many things we can do for ourselves if we will; how many things we actually do not need which we formerly thought we must have. A list of such things, each perhaps small in itself, could be given that would fill this newspaper column. And we are actually better off for the doing of things for ourselves instead of having somebody do them for us.

Some readers may think we are advocating a lower standard of living. Not at all. The standard of living in this country should mount steadily higher and higher. The difficulty is that we have confused what is essential to a high standard of living and what is not. Some things are essential to such a standard, but many things we have regarded as essential are not; rather they are pure luxuries, and these we should do without until we are well able to afford them. They should never be purchased until some reserve has first been accumulated.

Less mushroom growth; less waste and extravagance than in the past; continued economy in the matter of non-essentials such as we have been forced to practice recently; the building up of some reserve—these are requirements for the future; they constitute some of the lessons of the depression.

An Unusual Partnership

Mother and Son Establish Law Firm in Los Angeles

Mrs. Percilla L. Randolph and her son, W. Neil Randolph, have formed a law partnership in Los Angeles.

Mrs. Randolph has practised law since 1916, and her son, now 25, was admitted to the bar last month. He clerked in his mother's office before attending universities of Southern California and Northwestern.

The mother was admitted to the bar in the same class with Mabel Wheeler Wilbur, former assistant United States Attorney-General.

English Bibles, sold by one British organization last year, totalled 633,046.

A pinch of grease will keep starch from sticking.

Summer Complaint

"I have found Baby's Own Tablets the best of all children's remedies for Summer Complaint, Colic, Teething and Constipation."

—Mrs. George Walker, Thomasburg, Ont. (Certificate of Baby's Own Tablets, dated June 25, 1934, more than 1,250,000 packages sold in 1931.)

Dr. Williams' BABY'S OWN TABLETS

Some Bear Killer

Nova Scotia Man Accounted For 124 In Lifetime

Friends of Thomas Dillman, 75-year-old Halifax county hunter, who recently captured his 25th bear, acclaimed him as Nova Scotia's champion bear-killer, but evidently they had not read the records. This is from Trueman Costley of Kentville: "He may be the champion bear-killer of this province today, but he's away behind my father, David Costley. When my father died in 1923, in his 80th year, he had killed 124 bears. He killed his first bear when he was 14 years old and his last about a year before he died."

Grouse Going Around World Captain Wolfgang von Grouse, who recently completed his third air crossing of the Atlantic by the Arctic route, told Berlin friends in a wireless message that he planned to continue on around the world.

"What's that?" asked Sandy, pointing to something on Donald's neck. "It's a mole," answered Donald.

"Well," said Sandy, "the mole's moving, Donald."

Many a woman gives a party just for the pleasure of not asking her dearest enemy.

The woman who marries a man because she is sorry for him is apt to be sorry for herself later on.

Deep Gas Well

New Depth Record Is Attained At Turner Valley

Drilling to a depth of a mile and a third straight down into the earth, McLeod number four well in Turner Valley has attained a new depth record for Canada.

According to information received at the office of the McLeod Oil Company, the depth of the well was 8,801 feet with additional footage being made steadily.

This depth surpasses by nearly 300 feet the previous Canadian depth record held by British Dominion number one well which was drilled to 8,500 feet and abandoned after striking a fault.

"We are going right down to the Devonian formation and believe that we are entering it now," W. E. McLeod, official of the McLeod Company, stated.

Millions of years older than the Devonian limestone, the source of Turner Valley naphtha, the Devonian formation, never hitherto penetrated in the valley, may prove to contain a rich crude oil pool, according to some geologists. Some of the great geologists in the United States are predicting from the Devonian.

"The McLeod is one of the pioneer enterprises of Turner Valley, having been formed nearly 16 years ago. The present drilling experiment is being watched with great interest by oil men not only in Canada but in the United States."

Crazy Dieting Idea

Said To Be Contributory Cause For Spread Of T.B. Among Young Women

"The so-called emancipation among Canadian and American womanhood has resulted in a large percentage increase in tubercular trouble," said Dr. Gordon Dobbin, of the staff at Weston Sanitarium at Toronto, commenting on a report that tuberculosis was increasing among young women in England.

While no increase had been noted among young men from 18 to 25 years of age, Dr. Dobbin noted, young women are paying the penalty for habits of smoking, drinking and late hours and lack of sufficient clear air and outdoor living.

Another Toronto lung expert, Dr. William Ogden, said, "Although late hours have a great deal to do with the increase in tubercular trouble among the young girls of today, I believe this crazy dieting idea has just as much to do with it. Young women seem to be just as foolish about how to eat as about when to go to bed. We have learned it is better for a person to eat models than to be 10 pounds under weight than over weight, and for a young person to be under weight 10 pounds than to be over weight, but the modern girl seems to want to reverse this."

Freight Sheds Are Modern

Buildings At Churchill Ensure Rapid Transfer Of Shipments

The freight shed facilities at Churchill offer modern conveniences for rapid transfer of shipments. The new sheds are 335 feet in length and 175 feet wide. The front of the freight sheds is within a few yards of the wharf and just back of a railway siding, which will provide cars at the dockside so they may be loaded directly from the vessels' holds, if necessary.

The incoming goods may be moved into the building with equal facility. There are 19 doors facing the quay-side, two facing the south and one facing the north. The front doors run the entire length of the building. Nine doors are 16 feet in height and 19 feet wide. The front doors weigh one and three quarter tons apiece and have weights equal to their own weight on cables to enable them to be moved easily. The rear door at the south end is the tallest. It is 18 feet 6 inches, to give clearance for all manner of railway cars.

French Take To Air

Private Pilot's Licenses Show Big Increase This Year

French citizens are taking to the air for their own pleasure in greater numbers, according to the increased number of private pilot's licenses granted by the French government during the year ended March 1932, which totalled 465 as compared with 131 during the same period of last year, states a report from Assistant Trade Commissioner H. C. Schuetzle, Paris, France.

The glow of phosphorus is due to slow oxidation.

Argentina is making a variety of paper from straw pulp.

PERSONAL

SCOTTISH LADY AT PRESENT IN Canada, would like to take in charge one or more young ladies. Has experience in travel abroad, and with Canadian girls. Could act as companion to lady, in any part of Canada, or as travel companion. Has excellent testimonials both in Canada and in Britain. Would willingly give more information to interested party—Apply Box 59, Winnipeg Newspaper Union, 175 McDermott Ave., East, Winnipeg, Man.

An Interesting Document

Old Trading House Rules For Women In 1643

A document recently brought to Winnipeg, Manitoba, from one of the northern trading posts of the Hudson's Bay Company, dated back to 1643, shows the following provisions relating to women.

Marrriages—Throughout the country, in the absence of clergymen, chief factors only shall solemnize marriages, and no person shall be permitted to take a wife, or any establishment without the sanction of the gentleman superintending the district.

Employment for the women and children—in the course of the week, the attention shall be bestowed to furnish the women and children with such regular and useful occupation as is suited to their age and capacities, and best calculated to suppress vicious and promote virtuous habits.

Education—As a preparation to education, the women and children at the several posts in the country shall be addressed and habituated to converse in the language (whether French or English) of the father of the family, and that he be encouraged to devote a portion of his leisure time to their instruction as far as his own knowledge and ability will permit.

New Question Raised

U.S. Customs Asked To Refund Duty Charged On Goods Made At Sea

The United States Supreme Court was asked to decide whether customs duties can legally be imposed on articles produced on the high seas.

The question was raised by the Proctor and Gamble Manufacturing Company of Cincinnati on the importation of whale oil used in the manufacture of soap.

Under protest it paid a duty of six cents a gallon on the oil taken in the Ross Sea by Norwegian seamen under contract and brought suit to recover the money.

The trial court held that ships at sea and the property in them are a part of the country to which the ship belongs and that the whale oil was taxable as coming from Norway.

Persian Balm is a true elixir of youth. Refreshes and rejuvenates. Adds a youthful charm to the complexion. Softens and beautifies the skin. Makes hands flawlessly white. Indispensable to the woman who appreciates the finer distinctions. Delightful to use. Delicately fragrant. Softens dry and irritated skin. Corrects and cures the faintest lines. Regulates for every discerning woman. A true aid to beauty.

Contribution To Science

Report New Scientific Discovery Made By Curie Family At Paris

Mrs. Marie Curie's family has made a contribution to science. The discovery of a ray stopped more easily by common paraffin than by lead is reported in Nature, British Journal of pure science.

Irene Curie, daughter of the famous woman scientist, and F. Joliot, daughter's husband, report the discovery and say this ray is probably a beam of neutrons, almost infinitely tiny things called as new "ultimate particles" of matter.

The discovery offers light on the possible nature of neutrons.

Canadian Salmon

Canada Leads In Canned Salmon Imports Of Great Britain

Canada in the first six months of 1932 has definitely maintained the leadership in the canned salmon imports of Great Britain, which she captured from the United States a year ago. British trade figures show that in the first six months of 1930, the United States supplied 10,057,264 of the total import of 22,166,032 pounds, and Canada was second with 4,603,200. In 1931 Canada assumed first place with 9,564,444 pounds, and the United States was second with 7,440,896. This year Canada sent 8,991,808 and United States 3,977,264.

The Last Asthma Attack may really be the last one if prompt measures are taken. Dr. J. D. Kellogg's Asthma Remedy will safeguard you. It will penetrate to the smallest bronchial passages and bring about a healthy condition. It always relieves and its continued use often has a permanent effect. Why not get this long-famous remedy today and commence its use? Inhaled as smoke or vapor it is equally effective.

Hatching Wild Ducks

Nature is assisted in keeping up the supply of wild ducks for the sportsmen of Manitoba. Eight thousand young wild ducks have been hatched in incubators and are now learning to swim in the waters of Lake Winnipeg. Eggs were gathered near the lake and the young birds, although hatched by artificial means, present a healthy appearance. The experiment has been so successful that it is proposed to hatch 16,000 in this way next year.

Son Of Charles Dickens

Sir Henry Dickens, C.B., only surviving child of Charles Dickens, the novelist, is retiring from the position of Common Pleas judge of the City of London, England, which he has held for 15 years. In this office he sits constantly as a judge at the Old Bailey. Sir Henry, who is 84, is the oldest judge still upon the bench.

Stop and Think!

It pays to "ROLL YOUR OWN" with

TURRET FINE CUT Cigarette Tobacco

It pays in pleasure—and pays in actual cash.

For Turret Fine Cut is fragrant, mellow Virginia tobacco, that rolls into thoroughly satisfying cigarettes. You can roll at least 50 cigarettes with a 20c package.

FREE Chantecler cigarette papers with every package.

15¢ and 20¢ packages—also in 1/4 lb. vacuum tins

End Of Reparations

Conference At Lausanne Marked a Great Step Forward

To speak of the Lausanne Conference as if it were a European conspiracy against the United States is totally wrong. Lausanne marked a great step forward. It showed the European nations have returned to sanity, after all the madness of war and post-war nationalism. Because the Lausanne settlement will sooner or later bring the United States to a reconsideration of war debts, that inevitable result is not brought about by the desires of the Lausanne negotiators but only by the recognition of their helplessness in the face of existing conditions. —Winnipeg Tribune.

Miller's Worm Powders

being in demand everywhere, can be got at any chemist's or drug shop at very small cost. They are a reliable remedy for worm troubles and can be fully relied upon to expel worms from the system and abate the sufferings that worms cause. There are many mothers that rejoice that they found available so effective a remedy for the relief of their children.

Practically His Own Doctor

Prince Of Wales Has Profit By Much Advice

The Prince of Wales has become his own doctor—to a certain extent—according to his own testimony before the British Medical Association. "I have had so much advice," he told the learned physicians, "and have also learned his mistakes, that I have to some extent become my own doctor. The doctor," he added, "is certainly our first friend in life and our last."

Exports Of Oats Doubled

Exports of oats from Canada for the eleven months ending June, 1932, are double the amount for the same period in the previous year, amounting to 13,097,327 bushels as compared with 6,564,774 bushels.—Department of Agriculture.

Glasgow, Scotland, is to have a new \$1,400,000 hospital.

Mackerel can swim 70 miles an hour.

Thousands Of Mothers Are Grateful

"I wish I had known about this when I raised my first baby," so many mothers tell us. "Baby's Own Tablets" are giving babies more health, more happiness and less worry. They are the only baby medicine that is so safe, so effective and so easy to give. Write today and it will be mailed to you free.

The Baby's Own Tablets, Ltd., 111, Great St., Toronto, Ont. Customers' Places are shown on all bottles of Baby's Own Tablets.

Conquer Mountain Peak

Alpinists Reach Dizzy Heights In Jasper National Park

One man-year in the Canadian Rockies succumbed before the onslaught of alpinists a few days ago, when Dr. Max M. Strumia, pathological researcher with the university of Pennsylvania, and William R. Hainsworth, New York, made a first ascent of Mount Oublette, 10,000 feet, in the Banff group in Jasper National Park.

Of 30 first ascents made by Dr. Strumia in eight years of climbing in the park, Oublette proved the most difficult on account of the perpendicular and partly overhanging nature of the rock near the summit. The first attempt on the big rock was foiled due to storm conditions after 16 hours of climbing. The second attempt on July 22 hours. Due to the presence of snow couloirs, the descent was hazardous and included a 100 foot rope-off of great difficulty.

The two climbers returned after 16 days in the mountains. Mr. Hainsworth left immediately for Seattle, while Dr. Strumia returned to Philadelphia.

Great Boon For Blind

Everything Printed Transferred In Raised Letters and Lines

Automatic reproduction of print and handwriting in books, newspapers, maps, diagrams and pictures makes it easy for the blind to read and study anything from fashions to engineering. The machine transfers the print and handwriting from the book page to a sheet of aluminum foil in raised letters, figures and lines so that the sightless person may read by passing his fingers over the impressions. Every characteristic of the original is reproduced, whether it is a signature, picture or engineering diagram, says Popular Mechanics magazine. The speed at which the foil with its impressions issue from the machine can be regulated.

It Will Prevent Ulcerated Throat.

At the first symptoms of sore throat, which presages ulceration and inflammation, take a spoonful of Dr. Thomas' Electric Oil. Add a little sugar to it to make it palatable. It will allay the irritation and prevent the ulceration and swelling that are so painful. Those who were periodically subject to quinsy have thus made themselves immune to attack.

Wore Harrow Colors

Nothing sorrow about the necktie worn by Rt. Hon. Stanley Baldwin when he arrived at Ottawa to attend the Imperial Economic Conference. He wore a colorful combination of red, yellow and black stripes. Those are the Harrow colors, and Mr. Baldwin was merely sporting the tie of his old public school.

The Same Name

A woman entered a meat store with her small daughter. Seeing some tripe in the refrigerating case, the little one asked what it was.

"Tripe, dear," replied her mother.

"That's funny," said the child. "Daddy says that's what we get over the radio."

The Japanese government is considering spending \$10,000,000 in buying more private railways.

"WHY LOOK YOUR AGE?"

asks Billie Burke

"I'm really am 39," says this famous star. "And I don't see why any woman should look her age."

"We on the stage must keep our youthful freshness. To do this through the years means, above everything, guarding complexion beauty. For years I have used Lux Toilet Soap regularly—it keeps my skin amazingly clear and soft."

Years ago Broadway stars eagerly adopted Hollywood's favorite beauty care—Lux Toilet Soap. Actually 98% of the lovely complexions you see on the screen are cared for by this fragrance which costs only 10¢!

"I'm 39"

W. N. U. 1934

Scientific Advances Assist Economic Progress Only When Benefits Are Reciprocal To All

To aid directly in the efficient utilization of Canadian resources to meet Canadian needs: To aid as a nation in extending the bounds of man's knowledge: These are the objects of the National Research Laboratories, established at Ottawa by the Government of Canada.

Science, in the production of man's material needs, effected the industrial revolution. It found wide the limits of goods and services at man's disposal. It made possible the support of populations exceeding populations of the pre-scientific era by hundreds of millions and it offers man today the possibilities of material and cultural advance beyond the dreams of other ages.

A few days ago, a speaker, before a secondary education conference in New York, made the following statement:

"Society is fundamentally different from what it was a few generations ago. Perhaps even as late as two generations ago it was impossible to produce enough for everybody."

"The long-term answer as to whether we can afford secondary education necessitates a consideration of the available economic energy in the United States. One hundred and thirty years ago agriculture produced 90 per cent of all the people were engaged in agriculture or allied pursuits. In other words, it took 90 per cent of the population to provide the basic food, clothing and shelter for the entire population. Today 20 per cent of the population can provide all of the food, clothing and shelter and leave 80 per cent to provide cultural services and other types of commodities and services."

In his presidential address to Section III of the Royal Society of Canada at the Fiftieth Anniversary meeting two months ago, Norman Shaw, of McGill University, Montreal, said:

"The industrial applications of science are continuing incessantly to alter the course of mankind. The ratio of quantity of production to personal effort is being rapidly augmented, and a myriad of robots await a time of wide direction in the interests of all, when far seeing statesmen will adopt scientific method as the chief instrument of national policy. We await governments which will devote their major expenditure of effort, time and money in studying and directing the efficient harvesting and even distribution of the knowledge and power which science places at their disposal. Nature has provided enough available power and material to give every man, woman and child both a livelihood and the equivalent of many slaves apiece for long ages to come. The world is about to enter a most crucial period, let Canada play her part!"

Science says, in effect, today:

"What we have some one must produce. Millions living in areas of the earth in sub-normal conditions of life even in normal times challenge our production system. If the sum total of goods and services man creates is not sufficient to go around there is under-production. Until every citizen is a millionaire, an Englishman recently declared extravagantly, there will not be over-production. The distribution of purchasing power in order that society may take full advantage of its own development and power is society's supreme responsibility. Extreme and unbridled individualism as Sir Josiah Stamp has suggested, may not be the solution. A world of potential plenty has been wrought from a world of relative scarcity. So quickly has the transformation been effected that the possibilities of the changed circumstances in which man finds himself are yet but dimly appreciated. A fundamental change in the outlook of the common man is involved. There is potential economic energy sufficient to drive poverty from the earth. Thousands can be made available for new and greater tasks as society may direct."

It has been estimated that since the Great War the methods of production used or available in industry in Great Britain have made it possible for at least a 50 per cent greater volume of goods to be produced with the same amount of labour. The International Labour Office reports that from 1925 to 1928 output in Germany rose by from 16 to 100 per cent. In various

industries, while in Austria from 1924 to 1927 there was an increase of from 27 to 78 per cent. In the United States during the period 1918-20 to 1924-26, the average output per worker in the four main branches of national activity (agriculture, mining, manufacture and railways) rose by 27 per cent. In Great Britain according to the same source, the increase in production in a group of ten industries from 1924-1929-30 was 11 per cent., while at the same time the number of workers employed fell by 8 per cent.

The figures indicate the increased productive capacity of modern industrial equipment, contrasted sadly by the record of millions living in sub-normal conditions of life, and emphasize the necessity of comprehensive action.

The estimate that between 1845 and 1929—the period in which science made its greatest advances—the number of people in the world to be supported increased by more than 800,000,000, from 1,000 million to 1,800 million, refutes the charge that science has lessened opportunity for employment and if further rebuttal were necessary there stands the record of the gigantic electrical industry, built from the findings of Faraday, of the chemical industry, and many others employing millions which owe their present state of advance or their existence to science.

The following statement was made by William Green, the President of the American Federation of Labour, in the New York Times of July 17, 1932:

"During the period of high producing activity—1922 to 1929—the number of unemployed was steadily increasing, because of the rate of technical change. Even at the peak of production the unemployed had mounted to 1,000,000. This was the result of installing improved machinery and new processes without planning for the workers displaced and the consequences to the whole economic structure. Technical improvements become authentic economic progress only when adjustments bring reciprocal profits to all. The progress is in two directions—increasing opportunity for creative work and more adequate and dependable incomes. Neither groups nor nations can make continuous progress unless their gains are shared with others. The poverty of one is a drag upon the prosperity of others."

"When a company installs a new machine that, with a single operator, does the work of sixty men, what becomes of the sixty-eight? When a glass-bottle machine with one operative turns out as many bottles as forty hand operatives, what becomes of the thirty-six? This brought a displacement of labour of 80 per cent."

"The printer-telegraph substitutes typist for trained Morse telegraph operators in addition to displacing workers."

"The number of telegraphers and telephone operators controlling railway traffic has steadily declined since 1921, in close correlation with technical changes. Automatic devices and central and remote control of train movements have brought displacement. The decline between 1921 and 1931 for all groups in traffic control was 33 per cent."

"The loss of work opportunities to telephone operators through the dial system is 32.5 per cent."

"Mechanical music in motion-picture houses in Washington, D.C., displaced 60 per cent of the musicians in white theatres and 91 per cent in colored. Unemployment among all musicians is now 53 per cent."

"One operative and a ditch-digging machine can do the work that forty-four diggers with hand shovels formerly did."

"This problem of displaced workers is one which single companies or industries cannot solve within their own jurisdiction. It requires too wide a knowledge of economic trends and specific facts. To help meet the needs of business and these displaced persons the Federation has proposed a federal agency accumulating information on man-hours of work by industries, workers available and potential, and the factors that determine productivity and output. Such an agency would perform for wage earners and management a service in some respects similar to that which the Weather Bureau performs for ships; it would report where high and low in employment are developing, broadcast warnings of danger and spread advice in business planning and organization of the labour market. Such an agency could help to avert a situation like the one that plagues us now."

There are 619 miles of subways in New York City, of which 213 miles are actually underground.

Antarctica, or the Antarctic continent, is believed to have an area of about 5,000,000 square miles.

Old Sayings Modified

Original Messages Of Many Have Been Practically Lost

Have you ever wondered what some of our everyday sayings mean, and how they originated? Some of them have practically lost their original meanings, and others have become very modified by the passage of time. For instance, the expression, "As mad as a hatter," is only a corruption of, "As mad as an utter" or viper, and as the old meaning of "mad" was "venomous," the whole saying can be translated into "as venomous as a viper."

We do not, however, mean anything nearly as drastic as this when we use the saying nowadays.

Another saying which has altered somewhat in meaning is that a man "is not worth his salt." We do not literally mean that he is so degenerate as to be unworthy of the small sum expended on this household accessory, but that he is not worthy of his pay.

This is, of course, what the phrase originally meant, as the word "salary" coming from the same root as salt, was the money paid to a Roman soldier in order that he might be provided with that then highly prized commodity.

Some of our expressions date back to old customs, as with the phrase "to take pot-luck." In former days and indeed in the present day, it was the custom, in some of our remote country villages to keep a large family cooking pot always boiling over the fire, and into this anything edible was thrown, so that when meal time came each person dipped in for his or herself, and what they received was "pot-luck."

To "laugh up your sleeve" would seem a very peculiar thing to do if we took the saying literally, and yet it has its derivation in the fact that in bygone days sleeves were worn very wide and long, and if a person wished to hide a smile, he had only to lift his hand to his face to literally laugh up his sleeve.

One Of The Really Great

Hon. Stanley Baldwin Is Always Kind To Camera-men

Some of the photographers at Ottawa were surprised at the readiness of Rt. Hon. Stanley Baldwin to pose for newspaper pictures. As soon as the English statesman saw the cameras approach, he greeted them with a smile.

Most of the really great men are like that. It is only the ones who think they are important that try to make a fuss about their pictures being taken. And those same chaps are usually anxious to get their pictures right on the front page.

Arctic Islands Preserve

Wild Life Sanctuary Consists Of Large Land Area

The area of wild life preserves set aside for the benefit of natives by the Department of the Interior, in the North West Territories, Canada, has been extended by taking in all islands under Canadian jurisdiction north of the districts of Mackenzie and Keewatin, with the exception of a part of Baffin Island. This large area is now known as the Arctic Islands Preserve. It embraces a land area of 439,103 square miles.

"Come and have your face washed, darling—it's a beautiful face when it's clean."

"I don't want a beautiful face, Mummy: I want one like Dad's."

BRITISH OLYMPIAN

Here is the baby of the British Olympic team, shown as she had her first glimpse of New York, where she arrived, en route to Los Angeles. She is 15-year-old Mary Kenyon, one of England's foremost, girl swimmers, who hopes to add to her laurels and at the same time help her country at the international games.

Good Fishing In Saskatchewan

Pelliced Lakes and Streams Intrigue The Angler

The fisherman visiting in Saskatchewan will find ample opportunity to use his favorite rod and best tackle. A good all weather road leads northwest from Prince Albert to Sturgeon Lake (Nanew Lake), which is one of the noted pickered lakes of the district. It also contains pike, perch and whitefish. Emma Lake, thirty miles west from Prince Albert, is well supplied with fish and offers ideal camping locations. It is a beautiful lake with irregular shore line and extensive sandy beaches for bathing. It is surrounded by a heavy stand of trees, including spruce and birch. Sixty miles northwest of Prince Albert is Candle Lake, more difficult to reach, but offering miles of sandy bathing beaches surrounded by heavy spruce, jackpine, birch and poplars, wonderful scenery and an abundance of game fish.

Patronize Home Product

Statistics Show Manitoba Girls Prefer Canadian For Husbands

Manitoba brides prefer natives. Whatever the romance of far countries, the charm of strange people, they pick the home product first when choosing a life mate. The latest vital statistics for the province of Manitoba show that five times out of six Manitoba born girls marry British subjects or prefer Canadians. The remainder prefer Slav or Teutonic and spouses to Asiatics or even Latin ones in a couple of thousand countries a black. And the home preference goes double for Manitoba men.

Message From Prince

A party of schoolboys leaving for Canada in the charge of Col. J. S. B. Hills, received a bon voyage greeting from the Prince of Wales. "His Royal Highness," ran the message "hopes the boys will visit his High River ranch in Alberta, and sends his best wishes for their ninth tour."

Before his conversion, St. Paul was called Saul.

"Genuine education doesn't always come out of books."

Many Volcanoes In Honolulu

But None Of Them Dangerous Now Say Scientists

Honolulu is literally sitting on twenty volcanoes—but they are all dead, so say scientific men, although visible signs can yet be seen of the time when they were to be classed as dangerous neighbors. As one visits the city and its environs one can see the cones of these now dead volcanoes.

The one which is best known to visitors arriving in Honolulu harbor, is Diamond Head cone. This is the mountain which casts its shadow over the famous Waikiki Beach. Another volcanic cone which features much in the life of the city is Punchbowl crater. It is here that the city celebrates each year its Easter sunrise service.

According to scientists who have studied the geological formation of the islands, they are the summits of an immense range of volcanic mountains. The age of the range is estimated by geologists at several million years.

The individual islands were built up as one, two or more volcanic cones Oahu, the island where Honolulu is located is composed of two such cones. The building up of the islands as they are today, by layer upon layer of lava, covered a long period of time.

The Waianae range, southwest of this city, is said to have appeared first above the waves of the Pacific Ocean. It rose to a height of 5,000 feet above the sea. The torrential rains of the tropics then followed and as the ages passed the gulches and plains which today are the site of some of Hawaii's finest sugar and pineapple fields were formed. It is in this district that is located Schofield Barracks, United States greatest army post.

The next range to appear above the sea was the Koolau dome, which is northeast of Honolulu.

Plants and animals slowly found their way to these islands in the middle of the Pacific Ocean, where the islands are the summits of the so-called secondary volcanoes. This is estimated to have occurred within comparatively recent times, taken from a geological standpoint. The activity of these secondary volcanoes is believed by scientists to have occurred within the last 100,000 years, but a short time geologically speaking.

Touring Canada By Air

Americans Find It More Thrilling Than Motor Trip

The United States tourist has begun to abandon the motor car for long holiday tours, and to take to the air. There are at least a dozen Americans with their families touring Canada in their own privately-owned planes this summer. Col. D. G. Joy, district inspector of civil aviation, said in an interview at London, Ontario.

"Touring by plane is faster, more thrilling and there are no speed traps to worry about. Flying tourists get views of scenery that motorists can not see. There are airports everywhere, and plenty of fields suitable for landings. Everything is in the favor of the touring flyer," declared Col. Joy.

Col. Joy said that there was no more trouble clearing a tourist's plane into Canada than there was in clearing a tourist's automobile. It was passed through the customs at the border just like an automobile, and the tourist given to use it in Canada for a stated time.

Serves Double Purpose

Inventor Builds Hydro-Car With Special Boat Body

When Charles Wyborne of Wilbur, Wash., goes touring in his automobile boat it's no trick for him to speed along highways and cross lakes. The Wilbur inventor has constructed a hydro-car with a special boat body. It has a six cylinder motor, travels on land at the usual speed, can strike water at five to 10 miles an hour and travels in water at eight miles an hour.

No time is lost in going from land into water. The propeller operates from an attachment on the rear wheel and the operator can quickly raise the mechanism when the wheels touch land and can lower it when the boat floats in the water.

The boat body is 20 feet, six inches long, six feet wide and two and a half feet deep. It carries eight people comfortably, with a capacity of 12.

Within His Rights

A Frenchwoman Recently had her husband haled into court because he refused to utter a word of conversation at any meal time. The court decided a man had a right to eat in silent peace if he wanted to.

Oyster fisheries in the United States now rank second only to the salmon fisheries in value.

Rust Resistant Variety of Wheat May Be Available To Farmers Within a Period of Three Years

Rust, the disease of grain, has cost Canada in epidemic years as many as 100,000,000 bushels of wheat.

It has been estimated that the total yield of wheat on the Canadian prairies during each of the past two years has been reduced by drought by approximately the same amount.

At the annual meeting of the Associate Committee on Field Crop Diseases in Winnipeg on April 21, it was announced that a rust resistant variety of wheat would be available for distribution to the farmers within two or three years time. The hopes of the Committee may thus be fulfilled just ten years after the attack on the rust menace was co-ordinated and accelerated by the appointment of the committee. Dr. Robert Newton, the acting director of the Division of Biology and Agriculture, National Research Laboratories, and Professor of Field Crops and Plant Biochemistry, University of Alberta, has said: "The solution of such a problem in that period of time must be regarded as a scientific triumph of the first order."

Under the aegis of the Associate Committee on Grain Research of the National Research Council a comprehensive programme of investigation into drought resistance is now being conducted.

Plans have been made for the work to be done at the University of Alberta and the University of Manitoba. The University of Alberta is following a fourfold programme:

(a) To ascertain the resistance of wheat varieties to drought.

(b) To study in detail certain morphologic and physiologic characters associated with drought resistance.

(c) To study the mode of inheritance, and genetics, of drought resistance.

(d) To produce desirable strains of wheat resistant to drought.

With assistance from the Council the work that has been in progress at the University of Alberta will be extended. At the University of Manitoba, the Council is making it possible to do for durum wheats what has already been done on such an extended scale in various laboratories for bread wheats. Because of the demand, particularly in Italy where it is used for the manufacture of such alimentary pastes as spaghetti and macaroni, durum wheats have been selling at a premium over the bread wheats. It constitutes a large percentage of the wheat production of Manitoba and is not so susceptible to the more common forms of rust. Its significance in the drought resistance programme of the Associate Committee on Grain Research, is in its suitability for growth in dry climates.

With the recent destructive effects by drought to agriculture in the United States several major projects on drought resistance in field crops have been developed there, but it is probably in Russia that to date the most extensive studies on this problem have been conducted.

The Lenin Academy of Agricultural Sciences has an organization known as the Institute of the Control of Drought, organized for this particular purpose. A special journal devoted to the publication of studies on drought is issued by this Institute. Several new drought resistant varieties, superior in yield as well as in quality to other Russian wheats, have been developed by the plant breeders of that country.

In 1928 the University of Alberta received a number of Russian wheat varieties which were developed for growing in areas with a limited precipitation. During the past three years these varieties have proved to be superior to our own common grown varieties in resistance to drought, but are very inferior in certain other agronomic characters, especially quality. In 1929 Dr. O. S. Aamot, Professor of Genetics and Plant Breeding at the University of Alberta, commenced a breeding programme by making nine crosses between the Russian varieties and local strains which are superior in those characteristics in which the Russian varieties are inferior. The hybrid material developed in this way has reached the segregating generations and now an intensive study is about to be begun. Arrangements have been made to conduct the field tests on dry land at Brooks, Alberta. These field tests are made possible through the assistance given for field work by the Canadian Pacific Railway Irrigation Division and the Scarle Grain Company. The rest of the work on the project will be conducted at the university where laboratory and greenhouse facilities are available.

An apparatus in which it will be possible to generate artificial "chinks" has been constructed. It is similar to that used by Dr. V. V. Talanov, one of the Russian experts in drought resistance. It consists of a glassed-in chamber connected with a fan to a heating apparatus. Fans for wind blasts and equipment for temperature and humidity control are placed in the fan. Plants to be tested are grown in the greenhouse or in pots in the field in summer, and then moved to the special chamber where various combinations of wind, temperature, humidity and soil moisture can be supplied. The chink-

winds which have been mentioned are the warm dry winds which at frequent intervals, and without much warning, blow down the passes of the Rocky Mountains on to the plains, particularly in southern Alberta.

Investigations involving plant breeding and efforts to discover the fundamental nature of drought resistance, as the cereal rust work has indicated, require many years to bring to completion. Dr. Aamot thinks, however, that valuable progress should be made in the work to produce desirable strains of wheat that are resistant to drought in ten years time. Three years work has already been done on it at the University of Alberta.

Sheep and Swine Show

Saskatchewan Winter Fair Board Urged To Carry On This Fall

The Saskatchewan and Regina Winter Fair Boards were urged to carry on the fall sheep and swine shows as usual as a result of a joint meeting of the Saskatchewan Sheep and Swine Breeders Association directors in Regina. They recommend that the Saskatoon show be held October 27 and 28, and that the Regina show be held November 1 to 3, with the sheep and swine sale on November 3.

In order to make it possible to carry on, the following economy measures were recommended to these boards:

1—That the class for group of three market hogs and market lambs be discontinued, providing the Dominion government continue their class for groups of five.

2—That all bacon hogs be shown in one class. This means that in place of showing bacon hogs with Berkshire, Tamworth and Yorkshire characteristics in separate classes, all commercial hogs, irrespective of breeding, would be shown together.

3—That full prize lists be offered for Oxfordshire and Shropshire only, and that Hampshire, Suffolk, Southdowns and Leicesters have only partial prize lists.

4—That these two fairs be open only to Saskatchewan exhibitors.

5—That exhibitors be allowed to enter only two breeds of sheep and one breed of hogs and that not more than two entries per class be allowed one exhibitor.

Saskatchewan swine men are strongly opposed to the suggestion that the carlot class at the Toronto Royal be eliminated as an economy measure and instructed the secretary to write the Royal management to this effect with a request that it be continued. Further, the secretary was instructed to inform the Royal management that, should the class be carried on, the Saskatchewan association would donate \$50 to assist. Saskatchewan expects to exhibit in this class again this fall.

Spurs All Barriers

Ontario Farmer Claims He Owns Champion Jump Hog In Ontario

Who owns the champion jumping hog in Ontario? Probably J. W. Coulter, who lives seven miles south of Rednersville, Prince Edward County. Anyway, he is the title holder until someone puts up a better record, which is doubtful.

Here is the story as related by Mr. Coulter:

"I have a three-year-old Yorkshire sow which took to jumping out of the pen. I could not keep her in, so I added a board all around. She went over that. I added another, and she went over that. Then another which made the total of five feet in height, and behold—she cleared that with ease."

Sight Restored By

By Delicate Operation

Texas Doctor Grafted Artificial Pupil Into Man's Eye

Although completely blind for eight years as the result of an accident, Victor Rodriguez has regained sight in one eye following a delicate operation, consisting of the grafting of an artificial pupil into the eye.

Dr. J. D. Carroll of Harlingen, Texas, who performed the operation, is now perfecting a new type instrument which he thinks will make this type of operation much easier.

"The maid found a silver spoon in the hall, sir."

"Another guest with a hole in his pocket."—Buen Humor, Madrid.

"How long have you been married?"

"Do you mean this time or all together?"—Karikatur, Oslo.

Mr. H. R. Avery, of Avery Bros. Bakers and Confectioners, has disposed of his interest in that business to his brother, W. Avery, and has purchased the Bakery and Confectionery store at Bashaw. He takes over the new business immediately, and will make his home in Bashaw.

Lacombe Public and High Schools re-open for the Fall term on Thursday, September 1st. The School Board is glad to announce that all members of the former teaching staff are returning to their duties, with one exception. Mr. Gordon Duckworth has accepted a position on the Stettler staff and his place will be filled by Mr. Alexander Penman, who taught Spruceville School last year.

Thieves, Swindlers, Pickpockets! A gang of wolves from a great city, marking a village for their prey! Stangers to decency—Stroking at the laws of God and Man, they ridicule honesty and all the moral virtues. In their greed for gold, they plan a counterfeit "miracle" with the cunning of their kind, plotting to do the one uplifting influence to touch their wrecked lives.

They find themselves face-to-face with a power too great for their twisted minds to understand—too strong for their evil scheming. Even their shrewd souls are touched—quickened by the Power of Goodness made manifest before their eyes.

Thus the powerful story of "The Miracle Man" unfolds, wherein the Good triumphs over Evil. It's a drama so perfectly constructed—so forcefully told, that it would have been great a hundred years ago, and still will be great a hundred years hence.

Coming, Windle Lighter in "Manhattan Parade," Sept. 1, 2 and 3.
Double Feature "Conquering Herd and The Secret Cell," Sept. 8, 9, 10.

THE WORLD ECONOMIC CONFERENCE

Commenting upon the Ottawa Economic Conference, the New York Times stated: "The real gain at Ottawa was to focus attention on the fact that international trade is the product of tariffs, commercial trade and capital investment, not in any one nation or groups of nations but in all of them combined."

That seems to us, to epitomize the true spirit of the conference—the fact that the Imperial Conference should be a stepping stone toward further liberation of world trade rather than a challenge to trade on the part of the

group of nations included in the British Empire.

From the more detailed reports which have reached us during the past twenty-four hours it appears that the Imperial Conference did succeed in freeing the channels of trade between the Empire countries. The next step toward a freeing of world trade.

A world economic conference is a pretty tall order. It will involve an even more drastic operation than that of freeing Empire trade from the restrictions of Protectionist policy. The Protectionist who contributed to the success of the Ottawa meeting no doubt justified concessions by remembering that Empire reciprocity did not necessarily imply Free Trade, that it implied rather Protection of an Empire-wide nature than Free Trade in the true sense of that word.

Any world-wide arrangement which could be reached would necessitate definite concessions to the Free Trade principle. At Ottawa were represented two definite schools of thought. One regarded the conference with favor because it would promote Empire Protection; the other regarded it with favor because it would promote Empire Free Trade.

The clash between these opposing political theories would undoubtedly reach a deadlock at a world economic conference. At such a conference would be decided whether or not the Empire arrangement reached at Ottawa meant a liberation of the channels of trade or restriction of the channels of trade.

In the Imperial Conference a challenge on the part of the British nation to the world, or is it a gesture of friendliness? The question has not yet been answered.

FUTURE LOOKS BRIGHT
Under agreements entered into between Canada and the United Kingdom, as a result of the conference gathering at Ottawa, farmers of Western Canada have good reason to hope for betterment in their economic position at an early date. In addition to special advantages given them in British markets for their wheat, they have been promised equally valuable advantages in those markets for their livestock and dairy products.

From the viewpoint of the cattleman the situation now looks brighter than at any time since the imposition of heavy duties by the United States barred him from that nearby and profitable market. Much money and effort was spent by Canadian livestock interests in an abortive effort to persuade Washington authorities that their virtual embargo against Canadian cattle was bad business. Now relief comes to them from another direction.

With the special advantages given to Canadian swine breeders and producers of dairy products under the conference agreement there should be an end to the long period of gloom which has shadowed these branches of agriculture. The belief is expressed by those who should know that it will now be possible for farmers to engage profitably in these

lines for export purposes. If this proves correct and in bacon, butter and cheese, it becomes possible to supply the British market with our already preferred high standard goods regularly and in quantity sufficient to meet demands, the dawn of a new day will have arrived.

Add to these advantages that granted to wheat from Canada, and it will not make any great difference even though grain prices remain low and demand meagre. If that should happen and it became impossible to market the whole of our surplus export grain crop as grain, it can be marketed in our grain feed cattle and pork products a good profit.

One thing will be necessary if greatest benefit is to be secured from this opportunity. There will have to be such organization of these industries as will guarantee for our new markets in Britain that steady and sufficient supply by which alone we can hope to make our standing stable there. Governments, provincial and Dominion, have worked hard for years to perfect organization. It may well be that this is the time when realization of their hopes in this direction will be realized.

Bilious For Days At Time Until She Took Vegetable Pills

Gratefully, Mrs. C. writes: "The first dose of your wonderful Carter's Little Liver Pills gave me great relief after every medicine I tried failed." Because they are PURELY VEGETABLE, a gentle, effective tonic to both liver and bowels. WANTED

School teachers and others to study the Violin or Piano with William M. Touche, Graduate of the Chicago Musical College, and who has had over twenty years' experience as a teacher. Studio in his own residence, Lacombe. Season opens Sept. 2nd.

A Time for Careful Thought

Unless he formulates and follows a new economics it is only a question of time until the farmer as a self-respecting freeman will take his place in the museum of vanished types. In this new economics the principles of co-operative action will play a decisive role.

If the farmer is to cease being the beaten and buffeted victim of modern industrial civilization, if he is to become the master of his own economic and cultural destiny, he must organize as the rest of economic Canada has organized. If he does not he will be lost in the shuffle.

The Alberta Pool Elevators represent the foremost step in the co-operative efforts of Alberta farmers. Every Alberta grain grower should see that this Alberta co-operative organization is assured the greatest possible measure of success.

Bentley News

Miss M. Finn spent the last week at Aspen Beach, a guest of Miss Fern Rossell.

Mr. Van Blarcom of Calgary, left for home last week, where he will resume his duties in the Bank of Montreal.

Don't forget the show in the hall on Monday, August 29th. The main show is "The Big Trail". This show is one of the best ever filmed.

Mr. and Mrs. Osborne of Veld, returned home this week.

The tennis courts are being kept busy these days, many people from the beach are making use of them.

The summer camp at Brownsville landing has broken up for another year, but most of the cottagers are still at the beach enjoying their holiday at the beautiful bay.

Mr. H. Brownlow reports a very busy year at his store, and wishes to thank his many friends for their kind patronage this year, and in the past.

Several car loads of young people attended the dance at Syden Lake on Saturday night.

See the thrilling motion picture of the "Schmelling-Sherkey" fight to be shown at the hall Monday night. Other feature "Big Trail."

AUTOMOBILE ACCIDENTS

Over the week end and in the first couple of days of this week, there has been a regular epidemic of automobile accidents throughout the province. In one case when a light automobile struck a parked, unlighted truck at night near Okotoks, one of the passengers of the light car was fatally injured. In an accident north of Ponoka on Sunday, two young children of Mr. Sampson, formerly of the Adelphi hotel, here received painful injuries. At Lacombe on Saturday evening there were three accidents in which several people suffered injuries, and so on all over Alberta and the Dominion. In many cases accidents of the above nature could be prevented.

In the case of the parked, unlighted truck, it is no wonder that it is absolutely no excuse. To leave any vehicle or obstacle on the highway proper after dark, without lights, or protected in some way should be a criminal offence. It is no wonder that a car on the highway, unlighted at night that is to take out a culvert, or place a pile of poles or lumber there without being marked with lights.

In many cases where cars or trucks are parked without lights, accidents do not result, but that is no proof that they will not occur. As in the case at Okotoks, the accident resulted in the death of one of the occupants of the car. Had the truck been lighted, possibly the fatal accident would never have occurred.

In most cases when cars are left on the highway without lights, it is not a case of intentional neglect, but merely the conviction of the motorist that "everything will be alright". In these cases, as in lots of others, the owner of the parked vehicle is a victim of circumstances just the same as the person who runs into his vehicle.

It should be apparent from the standpoint of the safety of our highways that no one should be careless about anything connected with operating a vehicle of any sort, and should be careful to do everything that would help make our highways safer. Remember, your negligence or oversight might be responsible for the death or serious injury of other motorists—take every precaution.

POOL MEMBERS MUST DECIDE

Alberta Wheat Pool members are faced with making a decision as to whether they want their wheat pooled on delivery, according to an announcement made by pool officials.

"A change has been introduced in the method of operation of the 1932-1933 voluntary wheat pool as compared with the operation of last year," announced pool officials.

"A pool member must say at the time of shipment of his carload whether he wants his wheat pooled."

"Unless he decides to market his wheat on a pool basis at the time of shipment in carlots, he will not have the privilege of altering same to pool basis at a subsequent date during the season. Whether as delivery on the street or cash ticket basis is concerned, it is obvious that a pool member must elect at the time of delivery whether he wants to accept settlement on the pool basis or sell

at the then existing market price. Initial payment of the pool has not yet been fixed but a reasonable advance will be given in the meantime on wheat presented for pooling.

HERE AND THERE

Popularity of Canadian apples abroad has notably increased, and last year apple exports to Europe from Western Canada reached a new high record of 1,174,000 boxes, as compared with 560,000 boxes in 1926. Fruit growers are anticipating an even larger crop this year.

R. Y. Daniels, formerly Traveling Passenger Agent, Canadian Pacific Railway, Winnipeg, was appointed District Passenger Agent, Algoma District, North Bay, Ont., effective August 16th. Mr. Daniels has had a long and successful career with the company, and is now receiving congratulations on his most recent promotion.

Numbers of anglers returning through Ottawa and Montreal report having experienced exceedingly good bass fishing. This was the expression of a group from Cincinnati, Ohio, who recently visited the bass fishing waters of the Gatineau River, north of Montreal, according to A. O. Seymour, General Tourist Agent, Canadian Pacific Railway.

This is evidently the peak year with partridge, one would judge from the reports emanating from the reports of the Laurentians and Gatineau districts of Quebec, according to A. O. Seymour, General Tourist Agent, Canadian Pacific Railway. In almost every locality partridge is the ruffed grouse and Franklin grouse are best known, are very plentiful. Most flocks hatched this year are nearly full grown.

New freight rates on live stock with low minimum weights to meet the competition of motor trucks by the transportation of animals to market have been put into effect by the Canadian Pacific and Canadian National Railways covering movement from stations within a radius of 150 miles of Toronto, and those effective from August 15. The new rates are being tried out as an experiment, and it is expected they will result in a very substantial increase in the rail movement of cattle, sheep, and hogs.

One of the most interesting passenger arrivals in Montreal by the Canadian Pacific SS. Duchess of Richmond on August 13 was "Miss England III", the world's fastest motor-boat. After the international races with Gar Wood's boat at Detroit, Kaye Don will take "Miss England III" to Toronto, where visitors at the Canadian National Exhibition will be able to see an attempt by the powerful vessel to lower her own or any other new world record. The big speed boat was accompanied by R. E. Garner, senior mechanic, and "mate" to Kaye Don during the races.

Two hundred organizations affiliated with the governing body of the Canadian Chamber of Commerce, whose seventh annual convention will be held at Halifax, September 13-15, will send members to a pre- and post-convention sea cruise and land tour with the Clarke Steamship Co., the Dominion Atlantic and the Canadian Pacific Railways, scheduled to leave Montreal September 3 and return there September 13. The sea cruise will be on the S.S. New Northland, calling at Charlottetown, Sydney, St. Pierre-Miquelon, John's, Newfoundland, and Halifax, prior to the convention, and will cover the Maritime Provinces after it.

Keep Health the Eno Way

You do not have to use drastic and strong cathartics that cause irritation. ENO'S "Fruit Salt," by gently and safely ridding the intestinal tract of poisons, will help to make you and keep you healthy. A dash of ENO in a glass of water every morning or night prevents the evils of constipation. Be ENO conscious!

CWS

WORLD HAPPENINGS BRIEFLY TOLD

Manitoba's only salt well has started production in commercial quantities.

France has agreed to make no move toward revision of her debt to the United States until conditions are more favorable.

Richard Nicholls, licensee of the Centre Hotel, Vancouver, who does not, has travelled 25,000 miles to attend 48 consecutive Derby races.

Mill stones used for grinding wheat 100 years ago will be used again by Albert Miller, who is at present preparing to operate a water mill near Itaglan, Ont.

There was a substantial gain in the Prairie Provinces wool clip last year. Alberta clipped 4,854,000 pounds, Saskatchewan 1,605,000 pounds, and Manitoba 1,202,000 pounds. Total 7,661,000 pounds.

President Hoover's fortune has dwindled from \$4,000,000, in 1914, when he retired from active business, to \$700,000 at the present time, the magazine Fortune asserts in its August issue.

The appointment of S. J. Hungerford, acting president of the Canadian National Railways to be a member of the board of directors of the government-owned system is announced.

A giant aeroplane, believed the largest land plane ever constructed, has been completed in the aircraft plant of the Ford Motor Company, Dearborn, Mich. Officials plan a test flight in the immediate future.

Adding to his already large holding of big trees, Frank J. D. Barnham, of Montreal and Annapolis Royal, U.S., has completed the purchase of an additional 248 acres of giant Douglas fir trees on Vancouver Island.

While driving his own automobile, Dr. Hugo Bekker, dirigible expert, tried to pass another motor car and ran into a tree with such force that he knocked it down at Kempten, Germany.

The collection of nineteenth-century British Empire postage stamps gathered by Dr. H. A. James, president of St. John's College, Oxford, England, was sold recently for nearly \$34,000.

Extend Shooting Season

United States Season For Ducks and Geese To Be One Month Longer

Restrictions imposed on hunting ducks and geese in the United States last year were so successful in promoting an increase in these game birds that the 1932 open season will be two months instead of one month allowed in 1931.

The season will be October 1 to November 30 in the states bordering the Canadian prairie provinces, Minnesota, North Dakota and Montana. Throughout the country there will be a daily bag limit of 15, and a possession limit of 30, on all species of ducks.

Canada's Purebred Live Stock In a report to the Minister of Agriculture, A. P. MacVane, Chief Registration Officer, states that a total of 89,700 certificates for Canadian purebred live stock were issued during the fiscal year ending March 31, 1932. These were made up as follows: Cattle 33,288; horses, 1,734; sheep 13,330; swine, 10,139; foxes, 21,895; dogs, 7,380; poultry, 1,811; and goats, 123.

Many of the huge slabs of stone, each weighing several tons, erected at Stonehenge, England, by the Britons, were taken 160 miles across wild country from Wales.

Phosphorus for medicinal use is obtained from distillation of bone.

"There is room for only one head" - Sendaguis-Stix, Chicago.

Predict Heavy Shipments

Splendid Volume Of Business For Churchill Is Expected That grain shipments from Churchill this year will amount to approximately 4,000,000 bushels was the opinion expressed by W. H. Harling, ship agent.

Mr. Harling also predicted that Manitoba's ocean port will do a splendid volume of business, and will become a recognized world port to a very few years. Through his firm were made the first test shipments of grain from Churchill last year.

Insurance rates for the navigation season are now on an equitable basis and will grow progressively lower as the volume of business increases, Mr. Harling declared.

Grain shipped through Churchill from many ports of the west can now be laid down cheaper in Liverpool than by any other route, even taking into account higher insurance rates. Mr. Harling said, "I will be greatly disappointed if 4,000,000 bushels of grain do not go through Churchill this year," he declared. "I am convinced that in a very few years Churchill will be a recognized port and will do quite a considerable amount of business."

Unclaimed Dividends Present Many Riddles

British Government Holdings Aggregate Five Million Pounds With the Government's war loss conversion scheme, strange and mysterious financial oddities are expected to come to light again. Unclaimed stock and unclaimed dividends present many riddles. Unclaimed dividends are automatically transferred by the Bank of England to the debt commissioners after five years. The last available figures showed that the accumulated unclaimed dividends aggregated more than 5,000,000 pounds, a writer in the Sunday Chronicle points out.

A particular case concerned an aged Englishwoman who, although entitled to 50,000 pounds and to more than 20,000 pounds in dividends, had died in poverty after continually borrowing money from friends and relatives. Apparently she had entirely forgotten her large deposits.

Out of 68,000 letters sent out by the Bank of England with regard to a certain conversion some time past, 12,706 letters were returned through the dead letter office. Only 1,270 of these could be posted to fresh addresses. Unclaimed funds were credited to more than 10,000 accounts, amounting to more than 10,000 pounds. The holdings of one forgetful or vanished person amounted to no less than 187,000 pounds.

An Unusual Celebration

Couple In Belgrade Reach Hundredth Anniversary Of Their Marriage Even in Belgrade, the land of centenarians, the news of a couple celebrating the hundredth anniversary of their marriage has come as a surprise.

In a village, on the outskirts of Nish, a farmer named Stepan Filipovich, aged 117 years, married in June, 1832, Anna Alexandrovich, two years his junior. They have just celebrated their descendants, more than one hundred in number, including several great grandchildren, to mark the centenary. The occasion is so unusual that no one knows how to style it, few people ever thinking beyond a diamond wedding.

Both Stepan and Anna are still in good health.

Expensive Set Of Books

Vellum Used For Leaves As Well As Binding

Ten thousand Normandy sheep have been butchered to go into the most expensive sets of books ever printed, 100 sets of Homer's Odyssey in four volumes entirely printed and bound in vellum.

Ten thousand more sheep to go into volumes three and four are still grazing, for the printing is only half finished. To make sure that the vellum is of the same color and thickness, sheep of the same great flock are being used and killed at the same age. Next spring the 10,000 needed for the next two volumes will be slaughtered.

Naturalist Studies Birds In Sub-Arctic

Finds Millions On Rocky Island In Hudson Bay

Arthur C. Twomey, naturalist of Camrose, Alberta, returned to Churchill after a trip down the east coast of Hudson Bay, where he collected material on the migrating birds of that district, including wild fowl. He was accompanied by I. H. Smith, trapper of Big River, and A. J. Dalrymple, who is writing a series of stories on the sub-Arctic.

Millions of birds were found nesting on a rocky island in the bay. These included Arctic tern, oldsquaws, ducks, pin tails, Mallards and eider ducks.

Price Of Wives Drops

Three Head Of Cattle Buys One In South Africa

As currency in the region of Warmbaths, Transvaal region, South Africa, is based on the cattle standard, the severe slump in animals has brought down the price of wives.

Hitherto the current price for a girl was ten head of cattle. Wives have now become liabilities—those who have not got them are not in the markets, and those who have them are trying to get rid of them.

The present market price for a good wife is only three head of cattle, and unwanted wives are given away.

Gives Blood For Patient Forty ounces of his blood has been given by Major Coldstream, a surgeon at Peshawar, India, to an Indian patient, whose critical condition necessitated an immediate transfusion. It has been revealed that several years ago Gandhi's life was saved by a western medical man at a time when there was much opposition to British drugs among Indians.

One organization in London, England, is now printing the Bible in 655 languages.

It is estimated that between three and four per cent. of all people are left-handed.

"I ain't one of the graspin' sort. I'm considerin' your interests. The more you like to give me uncollected, the less I'll 'ave to take of you by force."—The Humorist, London, England.

Aviators Had Trying Time

Blown Off Course German Flyers Lost For Two Months

Two months ago Capt. Hans Bertram, 27, and Mechanic Adolph Klausmann took off from Koepang, Timor Island, for Darwin, Australia, 500 miles south. In their Junkers seaplane "Atlantis" they had left Germany three months prior, on a tour to boost German trade. From Koepang they never reached Darwin. For weeks flyers and foot parties searched the bush of Australia's north coast. Some black natives found the abandoned plane, and Capt. Bertram's cigarette case and a handkerchief, on the beach near Drysdale Mission, 100 miles northwest of Wyndham. Australian officials continued searching, dubiously. At last, one day a police launch brought Bertram and Klausmann ashore at Wyndham, nearly defenceless by suffering. Blown off their course in the night the flyers had landed near Drysdale, thinking it was Melville Island. They had a few biscuits, no water. For days they tramped the bush in search of water and friendly natives, and later drank the contents of the plane's radiator. On several occasions they plodded miles to what they thought was a signal fire, arrived exhausted to find an unattended bush fire. They "caught lizards on the rocks, which we ate ravenously." They fashioned a raft from one of their seaplane floats, paddled for five days in a rough sea, saw a steamer pass within a mile of them. Hunger drove them again ashore, to feed on snails and leaves. On the 28th day "to our great excitement we sighted a black, who brought a large fish, which we cooked and ate ravenously. We knelt and offered prayers to the good God for our deliverance."

In Remscheid, Prussia, Capt. Bertram's home, his mother had turned grey, his grandmother had died of grief.

Fewer Hand-Lace Workers

Old Industry In France Is Gradually Dying Out

Attention is being called to the discouraging decline in the hand-made lace industry in France. When the few remaining lace-makers, mostly very old women in the remote corners of Brittany and the Vosges districts, have died, it will probably be next to impossible to find anyone to take their places. Prices will of course rise and those who possess collections of fine old lace will be able to ask large sums for them.

High tariff barriers have made exportation practically prohibitive, the one remaining open market being Belgium, a country which makes nearly all of her own lace consumption. Low wages are also discouraging the lace workers who find that they can earn far more at packing sardines on other less artistic work.

Machine Makes Rain For Russian Farms

Tests Of Device Said To Have Proved Satisfactory

An artificial rainmaker termed at Leningrad, the first in the world, has been produced by the special institute for artificial rain.

The rain making machine develops current at 70,000 volts and preliminary tests are stated to have proved highly satisfactory.

A second apparatus, with a capacity of 200,000 has been put into construction. This larger machine is expected to produce even more startling deluges.

It is understood that this apparatus and others which the institute plans to construct will eventually be installed in central Asia and in sections of the Volga region where a scant natural rainfall often hampers crops.

Horse Still On Job

Despite the invasion of motor vehicles, there are still 5,509 horses at work in this city. This was disclosed in a statement from the city collector's office. There are 5,136 horse-drawn vehicles in Chicago. Of these, 365 are for two horse teams and four are for three horses.

Parachute leaps from airplanes at night are being attempted, with the aid of spot and search lights.

Don't get too self-important. You may be as wise as an owl and just as stupid.

Newspapers Win Prizes

Western Weeklies Receive Awards At Recent Convention

Prizes were awarded to the leading weekly newspapers at the annual convention of the Canadian Weekly Newspaper Association when the Rosemount (Bask.) Eagle, published by C. W. Holmes, was awarded the Charles Clark cup open to weeklies with circulation over 1,000 and under 2,000. Second prize went to La Chute (Que.) Watchman, and third to the Dufferin Leader, of Carleton Place.

The High Savage shield in the competition for papers under 1,000 circulation was won by the Grand Forks, B.C., Gazette, A. F. Mason, publisher. There was a tie for second between Alameda (Bask.) Dispatch, and Carleton Place, Newfoundland, Western Star, Swain River (Man.) Star and Times was third, and Pitt River Mirror, Miss Louise Schell, publisher, was fourth.

A special prize for the best front page display donated by J. A. McLaren, of the Barrie Examiner, was won by the Yorkton (Sask.) Enterprise, published by S. N. Wynn.

Recipes For This Week

(By Betty Barclay)

ORANGE FILLING (Sufficient for 1 two-layer cake)

1 egg.
6 tablespoons sugar.
2 1/2 tablespoons cornstarch.
3/4 cup water.

1/2 cup orange juice.
1/2 teaspoon grated orange rind.
1 tablespoon butter.

Beat egg, add sugar and cornstarch, mix well. Add water, juice and rind. Cook in double boiler 15 minutes, stirring frequently. Add butter. Cool before spreading on cake.

Orange Date Filling (Sufficient for 1 two-layer cake)

Add 1/2 cup chopped dates to Orange Filling.

Orange Marshmallow Filling (Sufficient for 1 two-layer cake)

Make Orange Filling, adding to it 1 marshmallow which have been quartered.

PARTY FUNCH

1 pint tea infusion.
1 pint cold water.
2 cups sugar.
2 cups crushed pineapple.

1 cup orange-juice.
1/2 cup lemon-juice.
1/2 cup strawberry syrup.

Mix all the ingredients and stir until the sugar is dissolved. Dilute with crushed ice. Serve in tall glasses garnished with thin slices of lemon and maraschino cherries.

Stagcoach Still Running

Makes Regular Trips Between Piccadilly and Hampton Court

Every day during the summer—except on Sundays—a stagcoach is travelling between Piccadilly, London, and Hampton Court. This is the Greyhound, which is said to be the last stagcoach in the world to make a regular daily run. It might be thought that nowadays, when there are so many faster modes of travelling, it would be difficult to make a stagcoach pay. But there are keen amateur drivers who appreciate being able to drive four-in-hand on one day each week, and are willing to pay for the privilege. And members of the general public get a real thrill out of a stagcoach journey.

Have a Good Complexion

Fresh Fruit Said To Be a Valuable Aid

Sir Wm. Arbuthnot Lane, noted specialist in dietetics, is authority for the statement that "fresh fruit eaten daily does more to beautify the complexion than any cosmetic." It is in this way that science explains the attraction of Canadian girls, who are noted for their remarkably clear and fresh complexions. Few countries in the world boast a wider variety of nutritious fruits, and few people serve fruit more liberally with their meals than do Canadians.—Dominion Fruit Branch.

Might Try Again

The following correction appeared in a small town paper:

"Our paper carried the notice last week that Mr. John Doe is a detective in the police force. This is a typographical error. Mr. Doe is really a detective in the police force."

George Washington was at one time one of the outstanding tobacco planters in Virginia.

When resting, a mosquito raises its hind legs.

Police Efficiency

Scotland Yard Has Remarkable Record For Securing the Public

The comparative immunity from serious crime enjoyed by the largest city in the world is not due to accident but to impartial enforcement of the law and police efficiency. Scotland Yard is synonymous with the successful pursuit of criminals, and this world-wide reputation is vigilantly safeguarded by taking full advantage of the latest scientific inventions.

The latest aid to crime detection in the metropolis is the installation of the most perfect radio network in the world. When it comes into operation at an early date, every district of the 700 square miles under metropolitan police supervision will be able instantly to communicate with Scotland Yard headquarters. Police tenders are to be provided with transmission sets and these will work on secret wave lengths, of which five have been reserved for police use. The same wave lengths can be used by several local authorities.

It is announced that under the new system the chances of anyone picking up a police message are much reduced. The police have the advantage that no one knows when their messages are going to be sent out and in addition a secret code is used. It is stated that often "cops" take future events into their hands and use the policeman on his beat will be equipped with radio. He will carry a miniature set in his helmet. Another new device just installed in London is an improvement in police telephone boxes. The opening of the door, as against the nearest police station that someone is inside. The caller hears a voice through a grille and gives his message without having to use any instrument.—Calgary Herald.

Selling Emperor's Treasures

Tourists Are Offered Articles Belonging To Former Chinese Rulers

The treasures of an emperor—many emperors really—are sold weekly in the sacred precincts of the Forbidden City. An advertisement in the newspapers attracts romantic foreigners who often "come in a history for you to obtain silk, brocades, embroidery, tea, etc., from China's former Imperial Household."

The articles on sale represent but a portion of the great chests full of tribute stored away by emperors during the centuries of mystery connected with the dwellers of the Forbidden City. Every Sunday from ten to four certain pavilions of the palace are turned into sale rooms where the articles are disposed of at moderate prices with full consent of the national government.

Australian Trees For Canada

Send Gift Of 18,000 Seeds Of Rare Trees and Shrubs

From the capital of another British Dominion—Canberra, in Australia—there has come to Canada a gift of 18,000 seeds of rare Australian trees and shrubs. There are 18 varieties and a thousand seeds of each variety have been presented to Canada as a gift from the Australian Government. The main varieties are: eucalyptus, acacias and casuarinas. They will be planted under the direction of the Canadian Department of Agriculture.

The presentation is in the nature of a reciprocal gesture. Canadian trees and shrubs have already been planted at Canberra and have taken so well that there seems no reason to doubt the Australian plants will do equally well in Canada.

Stagecoach Still Running

Makes Regular Trips Between Piccadilly and Hampton Court

Every day during the summer—except on Sundays—a stagecoach is travelling between Piccadilly, London, and Hampton Court. This is the Greyhound, which is said to be the last stagecoach in the world to make a regular daily run. It might be thought that nowadays, when there are so many faster modes of travelling, it would be difficult to make a stagecoach pay. But there are keen amateur drivers who appreciate being able to drive four-in-hand on one day each week, and are willing to pay for the privilege. And members of the general public get a real thrill out of a stagecoach journey.

Reporter Ate the Evidence

Investigation Regarding Cheese Had To Be Called Off

The reporter dropped into the civic relief depot at Oshawa, Ont., in search of news. He was feeling rather hungry. There was a piece of cheese. He ate it.

Then the trouble began. The cheese, it seems, had been returned by an irate householder, who declared it was absolutely unfit for human consumption. It was to have been examined by the medical health officer, food inspector, members of the relief committee and other officials. But with this evidence gone, the investigation was called off.

China has a national weather bureau just four years old.

"I haven't been so happy for years"

"I've just thrown out all my dust cloths"

—because I've found how to do the week better, easier and quicker. You use Appleford Wonder Paper now. You buy it in a neat package that tucks away handily in a table drawer. Twenty-five large sheets for a quarter. When you use it, you simply crumple a sheet into a ball and go over whatever needs attention.

"I've never seen anything like Wonder Paper. It really dusts, cleans and polishes at the same time. It takes up dirt like magic, and so easily. And you can use both sides."

"What I used to loathe about dusting was the bother of keeping the dusts clean. I always used odds and ends of old shirts and the like—and it seemed to me I was eternally washing them. It worried me just to throw them into a bag or cupboard. They seemed so unsanitary."

"The beauty of Wonder Paper is that you throw it away when you're through with it."

"I can promise that you'll like Wonder Paper. It gives you time for things very much more attractive than dusting."

Special Offer

WONDER PAPER is made by the makers of the famous PARA-SANI Heavy Waxed Paper in the Green Box. Most grocery, hardware and department stores have Appleford Wonder Paper in stock. If yours hasn't, send us the coupon below and we'll give you a booklet entitled "Lettovers," containing one hundred recipes, as a bonus for your trouble.

Appleford Paper Products, Ltd., Hamilton, Ontario.

Enclosed find 25c for which please send me one package of The Wonder Paper and your 100 recipes for "Lettovers."

Study Terrestrial Magnetism

Well-Equipped Expedition To North Will Investigate Polar Disturbances

The observations being carried out by the "Million Dollar Expedition" which will be stationed at Chesterfield Inlet this winter will be of great importance to Hudson Bay shipping, it was learned from members of the party who arrived at Churchill. Those who will go north are Frank T. Davies, M.Sc., McGill University, in charge of the party; R. T. McVeigh, B.Sc., research assistant, chemical engineer, Queen's University, Kingston; Dr. B. W. Currie, University of Saskatchewan, physicist; John P. Rae, observer and cook.

Chesterfield Inlet is situated within the realm of the most violent magnetic disturbances, which often render ordinary compasses useless at times, and which have proved one of the arguments against the success of Hudson Bay as a shipping route.

The party has the most elaborate equipment ever brought into the north for the study of terrestrial magnetism, earth currents, aurora and meteorological and upper air work.

It is expected that their studies will make a definite contribution to the relief of problems of navigators within the magnetic disturbance zone.

Decoration Day

The annual service will be held in the East We Forget Memorial Park, on Sunday, August 28, beginning at 2:30 p.m. Mayor Jones presiding. After the service the congregation is requested to proceed to the cemetery to honor the Soldiers' graves there. Offerings of flowers will be gladly received at the Globe Office; at any of the members' homes; or may be brought to the Park.

A. H. BABCOCK AND DAUGHTER HURT

On Saturday evening last, while A. H. Babcock, with his daughter Ethel were driving to town from the east, their buggy was dashed into by a car driven by Mr. Orvis, of Joffre. Mr. Babcock was thrown heavily to the road and sustained painful injuries to his face and head, but fortunately no serious results are looked for. Ethel was also thrown out and is suffering from injuries to her legs. The driver of the car stopped immediately and took the injured people to the hospital where they received first aid.

ANOTHER CRASH REPORTED

Hugh Sharp, while driving on the trail Saturday evening, had the misfortune to crash into a rig driven by Mr. F. Taylor, who lives north of town. A boy named Albright, who was in Taylor rig, suffered a broken arm, while the vehicle was badly wrecked.

MAN BIOLOGICALLY UNIQUE

Professor Julian Huxley, described the biological reasons why one man is different from another, in his popular lecture to the British Medical Association in the great hall of University College—the final meeting of the B.M.A. centenary celebration.

"Man is an animal, but he has numerous properties which are so different from those of all other animals that we may legitimately say he is more than an animal," he said. "Man is biologically unique in the variation he displays within the single species and the qualities of the mind. In man, mind has evolved the greater fluidity than in any other creature. In lower forms we find rigid instinct in which a certain kind of situation automatically brings about a certain kind of urge, which automatically leads to a certain kind of action."

"In the case of love every possible motion can be linked up to reinforce or counteract the primary sex instinct giving a complex emotional state which is without parallel in animals, and symbols such as the cross or national flag come to be stimuli of far greater complexity than any to which

an animal can react. Man is also the one organism whose development is never complete in the sense that an animal can be complete. An animal cannot do what a man must do—discover new desires, new situations, new knowledge, and new satisfaction.

Discussing the variability between the different types of men, he said that this was not merely social and acquired, but it was also biological and innate. "This means," he said, "that there must always remain a residuum of incomprehension and incomprehensibility between the members of society. This would be so even if everyone had equal opportunities and similar education. The tough-minded man can never really understand the tender-minded. The morose cannot appreciate the scientist or the philosopher. The man who can only express himself in music, and the man who can only express himself practically in business cannot fully comprehend each other."
